IT Security Assessment

Independent review by Sentinel Cyber, June 2025

Key findings:

1. In March 2023 a data breach exposed 48,000 customer records; regulators were notified late.

2. Production databases run on Windows Server 2012, which is end of life and no longer supported.

3. Multi-factor authentication is not enforced for administrators.

4. The analytics engine includes a GPL-licensed component that is distributed to customers.

5. There is no tested disaster recovery plan; backups have never been restored.

PRACTICE DOCUMENT for testing Fine Print. Orion Analytics Ltd is not a real company.
